

6516207818.txt

I am new to satellite radio and switched because of all the poor and tasteless programming on the local stations. I don't feel that providing "local" traffic and weather content is pushing in on the local broadcasters, because I don't want to listen to their station in the first place. Why should I be forced to go to them for local information when I can get the programming and content that I want on satellite radio. They also offer music and news, which I also receive on satellite radio. Will NAB be asking XM to stop playing music next? I pay for the content that I receive because the local broadcasters can't offer what I get on satellite radio. I respectfully ask that you reject petition 04-160.

Thank You
